

TechBag Digital

Scaling TechBag Digital

Audience targeting, content strategy and acquisition channels

Contents

1	About TechBag	Where TechBag is today, and the main opportunity
2	Competitive landscape	Where TechBag can win against broad catalogues
3	Website and SEO audit	Site health, top issues and what to fix first
4	Audience targeting	Three segments, and how I'd target them
5	Acquisition channels	Where we reach buyers, and the starting split
6	Content strategy	Four content pillars, how we post and the weekly rhythm
7	90-day plan	What happens in each 30 days, and how we'll measure it

TechBag has a strong offer, but quiet distribution

About TechBag

- Bangalore-based software marketplace, started in 2021
- Businesses can find, compare, review and buy software in one place
- Vendors can list their products and reach potential buyers
- Solves a real problem: choosing software takes a lot of time and carries risk

Clear positioning

Independent, industry-specific software buying advice across Adobe, Acronis, Veeam, ESET, Seqrite, Kaspersky and Versa.

What I noticed

97

posts published

48

followers

4–36

views on Reels

- Content focuses on security and backup tools (Acronis, Veeam, ESET, Kaspersky)
- The feed reads like vendor brochures: text-dense designs where partner logos speak louder than TechBag
- Reels are mostly static slides and logo cards with no hook, face or story
- Real hooks (up to 25% off Adobe, Kaspersky at Rs 2,000 per licence, a Zero Trust webinar) are buried in the design
- The bio doesn't clearly say you can compare and buy software on the website

The issue isn't a lack of content, it's reach and trust, so the approach gets content in front of the right buyers

The main opportunity

- 1 The issue isn't a lack of content, it's reach and trust
- 2 Security and backup is a strong niche to build expertise in

My approach

LinkedIn and Google

Reach business buyers

Instagram

Simple educational posts, product offers and real customer stories

Bio fix

Clearly say "Compare and buy software" with a website link

The goal

1 More people discover TechBag

2 They understand what it offers

3 They move to the website

From discovery to the website, where buyers can compare and buy.

Broad catalogues leave room for a specialist: TechBag can win by going deep on security and backup advice

Player	What they do	Where TechBag can win
Techjockey	Large Indian marketplace: thousands of products across hundreds of categories, with reviews, demos and online buying	Go deep on security and backup with real advice, where they go wide
SoftwareSuggest	Indian discovery and recommendation platform for SMBs; earns by promoting software vendors	Lead with transparent deals and plain-language guidance, not vendor listings
Software Advice (G2)	Global platform with free one-on-one advisors and verified reviews	Rupee pricing, Indian support and reviews from Indian buyers
Vendors and distributors	OEMs sell direct, and distributors resell through their partner networks	Neutral comparison across vendors, with one place to buy
White space to test	Become India's go-to advisor for security and data-protection software for SMBs. TechBag's G2 profile has too few reviews to rate, so collecting verified customer reviews is part of the plan.	

The site is healthy at 94%, so the priority is a few technical fixes and a landing page for each product

94%

Site health score

No broken or blocked pages

What I'd do

- 1 **Fix first:** repair the 4 invalid structured data items
- 2 **Then:** minify the JavaScript and CSS files
- 3 **Next:** build a landing page for each product to support Google Search

Top issues

Issue	Status	Number of issues
4 structured data items are invalid	Error	4
6 pages have too much text within the title tags	Warning	6
7 pages have low text-HTML ratio	Warning	7
1 outgoing internal link contains a nofollow attribute	Warning	1

Reach buyers by role and trigger, starting with SMBs and growing teams as the fastest to convert

1**SMBs & growing teams****PRIORITY 1: FASTEST TO CONVERT**

- Founders and IT/ops teams looking for affordable software
- Focus on antivirus, backup and Adobe tools
- Keep the messaging simple and practical

Hook: Bundles, offers and quick recommendations

2**IT & security leaders****PRIORITY 2: BIGGER DEALS**

- IT managers and security heads at mid-sized companies
- Target needs like endpoint security, ransomware protection and zero-trust

Hook: Comparisons, webinars and ROI-focused content

3**Education & healthcare****PRIORITY 3: BUILD LATER**

- Schools, colleges and healthcare organisations with specific compliance needs
- Longer buying process, but potential for repeat renewals

Hook: Simple compliance guides and industry-specific content

How I'd target**1**

Start with India, especially Bangalore startups and SMBs

2

Use LinkedIn to target by job role and company size

3

Use search behaviour and buying triggers like renewals, audits and security concerns

4

Track which audiences actually convert and adjust based on the data

Go where buyers already look: LinkedIn and Google Search take 60% of the starting effort and budget

Channel	How we use it	Share of effort and budget
LinkedIn PRIMARY B2B CHANNEL	Our main B2B platform. Share useful content to build trust and run ads targeting the right job roles and companies.	30
Google Search HIGH INTENT	Reach people already looking for software, like “buy Acronis India” or “best backup software for SMBs”, with a landing page for each product.	30
Webinars and email CONVERT INTEREST	Turn interest into leads: webinar sign-ups, email follow-ups, and staying connected until they’re ready to buy.	20
Vendor co-marketing PARTNER AUDIENCES	Joint webinars, campaigns and content with software brands, reaching their existing audience.	10
Instagram BRAND PROOF	Awareness, customer or product proof, offers and retargeting. Not the main lead-generation channel for B2B.	10

Suggested starting split of effort and budget. Rebalance after 30 days of data.

Content should guide people when they're choosing software, not feel like a sales brochure

Main idea

We shouldn't make the content feel like a sales brochure. Instead, we should try to be helpful and guide people when they're choosing software.

1 Buyer Education

- Answer common questions in short, easy-to-understand videos, like “Which backup software do I actually need?”
- Keep the information simple and relevant to different industries and team sizes

FORMAT Short explainer videos

2 Compare & Prove

- Compare different products honestly, for example Acronis vs Veeam for small businesses
- Share simple examples of how the right software can save time, money or reduce downtime

FORMAT Honest comparisons

3 Offers

- Share one deal from each vendor every month
- Clearly show the price, how long the offer is available and what people need to do next

FORMAT One deal per vendor, monthly

4 Live & Webinars

- Turn each webinar into around 5 short clips
- Collect registrations through email and follow up with people after the webinar

FORMAT Webinar plus 5 clips

Every post keeps TechBag at the centre, follows a weekly rhythm and ends with one clear call to action

How we post

1

Keep TechBag as the main focus, while the vendor logo supports the content

2

Keep each carousel focused on one clear idea

3

Use Reels with a real person on camera and a strong hook in the first few seconds

4

Keep the overall look and style consistent across the content

Weekly rhythm

Per week

3

Reels

2

Carousels

1

Offer post

+

Extra clips from webinars

One clear CTA at the end of every post, mainly directing people to thetechbag.com

Over 90 days we set things up, start running, then grow what works, with targets set after the first 30 days

How I’ll measure it

1	2	3	4	5	6	7
Qualified leads and quote requests	Cost per lead	Number of vendors listed	Leads generated for each vendor	Webinar registrations	Average Reel views	Revenue influenced by marketing

Targets: I’d set the actual targets after the first 30 days, once we have some real data to work with.

Thank you

Questions and discussion

Summary

- 1** The issue isn't a lack of content, it's reach and trust
 - 2** Start with SMBs and growing teams, then IT and security leaders, then education and healthcare
 - 3** LinkedIn and Google Search reach business buyers; Instagram builds awareness and proof
 - 4** Be helpful, not a sales brochure, with one clear CTA to thetechbag.com
 - 5** Set the actual targets after the first 30 days, once we have real data
-
